solution that stimulates critical thinking, and fully-integrated STEM teaching tools. Filled with stories and easy-to-understand examples, it demonstrates how evolutionary and biological processes work. It is organized into seven sections: Genetics, Genomes, Cells, Ecosystems, Physiology, Behaviour and Diversity. With 696 color photos, 351 tables, 154 figures and 135 answer questions, and fully updated to reflect the most recent science, this edition includes six new chapters and fully reorganized and expanded content. Moreover, it is accompanied by a flexible, fully-integrated digital textbook that enables students to seamlessly access science lessons, concepts, and exam questions from any device. ****Campbell Biology Eleventh Edition**** is used in a wide variety of courses, including Life Sciences, Biology, and Environmental Science, and more. ****Updated information, new chapters, and a dynamic curriculum that works on all devices for a complete biology experience.****

{#F1} ****UPDATED COLOR PHOTOS**** {#F2} ****A THICKER, UPDATED CURRICULUM****

Campbell Biology Eleventh Edition is organized into seven sections: Genetics, Genomes, Cells, Ecosystems, Physiology, Behaviour and Diversity. It includes six new chapters and expanded content. The topics are further divided into 21 chapters. The chapters cover topics such as: \[****GENETICS****\] Mendel's Laws and Genetics, Chromosomes, Mitosis and Meiosis, Sex and Meiosis, Development and Cellular Differentiation, Gene Structure and Gene Expression, Gene Regulation, Hormones, Cellular Signalling, Metabolism, Glycobiology, Genetics of Complex Diseases, Genomic Applications, Transcription, Translation, Mutation, Cancer, DNA Repair, Genetics of Inheritance. The newly-updated chapters include: Mitotic Cell Division, Cell Motility and the Cytoskeleton, Neurobiology, Epigenetics, Cell Differentiation, Tissue Specificity, Genetics of Infectious Diseases, Environmental Influences, Clinical Disorders, Genetics of Mendelian Disorders, The Genomic Revolution, Chromosome Aberrations, Molecular Genetics, Chromosome Structure, Introduction to Bioinformatics, Variation at the DNA Sequence Level, Cytogenetics and Genomics, Diversity and Evolution, Microbial Genetics, and The Human Genome.
